

## Copper Plated Retro Pen Kit

### Important Information

Copper is soft by nature and is less resistant to wear than most other metals for plating pens. For this reason, your copper plated Jr. Retro Pen kit has a much thicker layer of copper plating than that normally applied to other platings. With this being the case, the copper fittings on this pen are slightly larger in diameter than those found on other Jr. Retro Pen Kits. In order to ensure a good fit and finish, be sure that the *finished* wood barrel is slightly larger than the steel bushings used for turning the pen. We recommend softening the corners of the wooden barrel with a fine abrasive to provide a smooth transition between the barrel and the fittings. As with most pens, the finished wood barrel should be slightly larger in diameter than the fittings so as to prevent an exposed metal edge when assembled.

If you need advice or assistance with this or any other pen from Craft Supplies USA, please contact us at 1-800-551-8876 or at [service@woodturnerscatalog.com](mailto:service@woodturnerscatalog.com)
