

Aniline Powder Dye

Mixing and Usage

1. When using aniline powder dye start with a mixture of 1/4 tsp. of dye to 1oz. of water to begin. For a more intense color simply add more powder dye till you achieve the shade of color you're looking for. Likewise, you can dilute the dye with water for a less intense color.
2. Apply the mixed dye onto your piece with a rag or brush. Once the dye is completely dry you can use your choice of finish. We recommend spray lacquer on top of dyes as it prevents the dye from "bleeding" or "running".
